

Evans Axiom™ Console Furniture

The Axiom™ is made from high-performing technology called structural polymer. It is a unique, one step process which combines inert gas (nitrogen) and a thermoplastic resin, injected together to give a rigid plastic part. Lightweight with superior strength-to-weight performance, structural polymer molded parts have 2 to 5 times better strength-to-weight ratio than metal parts. Forty color options available or choose High Pressure Laminate exterior for a furniture grade look.

Product Features

- Standardized parts
- Desktop, Slat Wall or Enclosed Monitor Options
- Easy front, top and rear access to console interior
- Hidden storage
- Easy to install with basic tools

- Integrated cable management
- 24", 48" and 72" modules
- 15, 22.5, 30 and 45 degree corner units available

A Closer Look at Key Features of Axiom™ Console Furniture

Multiple Configuration Options

Axiom™ allows you to choose or combine from several console types. Monitors may be placed directly on a large desktop, mounted to a slat wall or completely enclosed behind tempered glass. Desktop or slat wall units can be placed next to enclosed units to provide additional work space.

Fully Enclosed Reduced-Depth Option

Only 37" in depth, the Axiom™ LCD units helps you take full advantage of your usable space. Easy accessibility to monitors from the front or back of the unit. Vented back panels help reduce heat build up. Can be configured next to a full desktop or slat wall section.

Two-Tier Configuration

The Axiom™ can accommodate two levels of monitor enclosures in both full and reduced depth models. Monitor enclosures provide a clean, sleek look whether you are using CRT or LCD's.
